

Online Tax Management System

Introduction

The main aim of our project is to prepare a Tax summary or Tax Returns of a client. In Tax Information System, a client registers himself enters all the details and uploads various Documents that are necessary for preparation of Tax Summary and Schedules for an interview after successful submission of all the documents. After all the procedures are completed Tax Returns or Tax summary is prepared for all the clients by the admin who calls the clients and arranges an interview for discussing various issues regarding Tax summary.

Functionalities of the system

In this online tax management system, there are many reports like client profile, schedule status, payment status, admin and client report and so on. In this system, if a new person enters the site, they can register themselves and provide their details and will be provided with credentials to login and store or view their reports in the database. The registered client can upload the documents associated with their tax generation. They can schedule their convenient time and date for the Tax interview. A summary report will be generated based on submitted documents and the interview. Based on Tax summary report the client can pay their taxes through the system. After the Tax being paid another report will be generated.

Modules in the system

This system includes the following modules

- Interface creation for tax table management.
- Register and create client profile
- Schedule tax interview
- Generating a payment report
- Accepting the payment from the client
- Generating the E-File acknowledgement report

Benefits of the system

This system supports the management, clients and admin by providing them necessary information. This system also can generate different reports based on the requirement.

S.no	Roll no	Name	Role
1	CB.EN.U4CSE20215	Demada Harsith Reddy	Designer
2	CB.EN.U4CSE20216	Dhanush Penugonda	Leader
3	CB.EN.U4CSE20221	Gutha Venkat Sai	Testing and Documenting
4	CB.EN.U4CSE20232	Koduru Vivek Sai Reddy	Developer

Development Platform:

- For Database - SQL
- For User Interface - Java
